

Accelerate Your Carbon Footprint Reduction

With

FarEye's Intelligent Delivery Management Platform

Business Context

With reports estimating the ecommerce industry to boom with a 10X growth rate, there is tremendous pressure on enterprises to assess and address the impact that logistics operations can have on their carbon footprint. While the boom might open new doors to being more profitable, the severity of the impact on carbon emissions with a burgeoning number of deliveries on this scale needs to be addressed proactively.

Leading enterprises have set aggressive targets for carbon footprint reduction and this would need a serious look at their logistics processes, operations and execution to make them more efficient at every step and improve on a continuous basis.

FarEye's intelligent delivery management platform is helping enterprises eliminate 21,334 tonnes of carbon emissions each year. This is a significant impact on their journey to becoming more sustainable enterprises.

About FarEye

FarEye's low-code intelligent platform is powering shippers and carriers to do faster, reliable, customer-centric deliveries at scale. FarEye's Intelligent Delivery Management Platform is making the delivery experience better for everyone.

FarEye enables enterprises to deliver at reduced cost with a superior customer experience. The low-code approach provides an environment to develop applications with a quick turn-around time and minimal code to shorten the "concept to ship" cycle. The platform leverages millions of data points to predict the shipment journey and improve delivery experience.

3-Steps To Sustainability

- 1** *Measure: Benchmark existing emission levels & identify areas to reduce*
- 2** *Innovate: Deploy advanced optimization techniques like machine learning based routing*
- 3** *Improve: Build customer-centric processes & achieve impactful operational results*
